

Assessment of Arabidopsis Plants

Comprehensive Assessment of Plant Growth

Comprehensive automatic assessment of plant growth during the entire life cycle of the plants with the LemnaTec Scanalyzer GH results in profound quantitative information about the correlation of growth behaviour and genomics.

Structural analysis based on shape imaging from top and side views

Analysis based on leaf size, leaf number and colour

LemnaTec Bonit GH software enables you to efficiently quantify a large set of growth parameters and thus to establish a basis for rational screening and further data mining projects.
